### **Congratulations on selecting your new Carson compact binoculars!**

With reasonable care, your binoculars will provide you with years of enjoyment. In order to achieve optimum performance, please read the instructions carefully on the proper use and care of your binoculars.

### **Eye Adjustments**

**How to adjust for distance between your eyes:** The distance between the eyes, called “interpupillary distance”, varies from person to person. To achieve perfect alignment of lens to eye, follow these simple steps:

1. Hold your binoculars in the normal viewing position.
2. Grasp each barrel firmly. Move the barrels closer together or farther apart until you see a single circular field. Always reset your binoculars to this position before using.

### **Focusing Your Binoculars**

1. Rotate the independent right diopter eyepiece\* to its index mark and sight on a fixed distant object.
2. Cover the right objective (front) lens with your hand, then rotate the central focusing knob until the image in the left eyepiece is sharp.
3. Cover the left objective (front) lens with your hand, then rotate the independent right diopter eyepiece until the image is sharp. (Note this setting for future use.)
4. Image should now be focused to your individual eye strength.

\*Not all binoculars have independent right diopter focusing. If your binocular does not have this feature, simply focus using the center focus knob.

### **Roll-Down / Twist-Up Eyecups**

Many binoculars are fitted with eyecups designed to exclude extraneous light. Position the eyecups in the uppermost position to help reduce extraneous light and external glare. If you wear eyeglasses, you may choose to roll/twist down the eyecups. For eyeglass wearers, rolling/twisting down the eyecups will bring your eyes close to the binocular lenses, thus providing an improved field of view.

### **Instructions For Care**

Like any fine instrument, your binoculars should be given sensible care. Always store your binoculars in protective case when not in use. Do not drop or violently jar your binoculars. This may cause the internal optical components of your binoculars to become misaligned resulting in a double image when looking through them. Do not expose to excessive moisture.

### **Cleaning**

Cleaning must be done safely and carefully to avoid scratching the lenses and permanently damaging your binoculars. Safe cleaning can be accomplished by following the procedure below:

1. Blow away any dust and debris on the lens (or use a soft lens brush).
2. To remove dirt, grease or fingerprints, clean with a microfiber cloth, rubbing in a circular motion. Use of a coarse cloth or unnecessary rubbing may scratch the lens surface and eventually cause permanent damage.
3. For a more thorough cleaning, photographic type lens cleaning fluid may be used. Always apply the fluid to the cleaning cloth, never directly on the lens.
4. **IMPORTANT:** Never attempt to clean your binoculars internally or try to take them apart.
